**SMB Transportation plants**

Goods have to be transported first of all, wherever filling takes place and where either storage or shipping has to take place. Transportation plants from *SMB Logistics* are therefore the ideal extension for the filling plants, palletizer plants, ship loading plants and for warehouse logistics - all from the same manufacturer.

All the modules of the transportation plants and conveyor equipment are coordinated with the special plants. *SMB Logistics* offers comprehensive advice on the selection and assembly of the necessary system components. Even the extension of existing systems with extra modules for transportation - and conveyor technology is also possible without any problem. Save costs - have a word with us!

**SMB** Group

**Automatic Systems for Filling, Storage and Conveying**

**Our know-how : Your benefit**

You will find a safe solution for your task, whether you want to deposit huge paper rolls, drums or pallets in compact warehouses or grain in silos because we do not just show you how to warehouse your items or to measure how full they are, but we also construct fully automatic filling systems for you, whether these are for liquids or solid materials.

Loading sacks on to ships ? An ideal application for the spiral chute. And palletizing for cardboard boxes ? We only need to ask you: „With, or without box turner ?“

Turntables, chain conveyers, welding systems, rotating and moving carriages, drive in and shuttle systems. You can get this and a lot more from SMB and MBA. Precisely coordinated according to your wishes and ideas. As a turnkey project. In an extremely sturdy and high value quality. Also for use in explosion endangered zones. Have a word with us.
